

# OOPsie Meeting

OOPsie

LP1, 2021

Meeting participants: Axel Larsson, Love Lindqvist, Petter Blomkvist, Simon Johnsson, Simon Engström

Facilitator: Love Lindqvist

Date: 2021-10-04

## §1 Meeting startup

### How is everyone?

Simon E. is feeling fine after a few days of rest. Simon J. is feeling a little bit sick, and calling in via zoom. The rest is feeling fine

### Meeting objectives

Moving forward with development

## §2 Reports

1. Save/load functionality now merged into dev. Might make some changes to how addresses are saved through the visitor pattern, right now it doesn't work the same way as the rest of the objects.
2. The GUI is being constructed. Simon E has started to implement the calendar/event viewing page. Axel has started to implement the contact browsing-view.

## §3 Discussion items

- Observable User?
- How should the controller access the model?
- Should the entities in the model have public constructors or how do we solve addition of information from the controller?

## §4 Outcomes and assignments

### Outcomes

- To solve the private constructor issues, we have decided to make wrapper classes for the Event and Contact lists now residing in the User class. This object holds functions to add/remove etc. objects from the lists. By then passing that object to appropriate controllers, we avoid having to call the constructors of the objects, the wrapper object can do that for us, we just send the parameters from the controller into the wrapper.
- We decided to use observers for updating objects such as contacts and events.

## **Assignments**

Group members will continue to implement GUI functionality as fast as possible to reach a interactive runnable version before friday. When a group member is done implementing what they are responsible for, they continue writing the RAD/SDD, since they are also due on friday.

## **§5 End of meeting**

Sometime on Friday, wrap-up before peer-review deadline.
