

# Group meeting

OOPsie

LP1, 2021

Meeting participants: Axel Larsson, Love Lindqvist, Simon Engström

Facilitator: Axel Larsson

Date: 2021-09-09

## §1 Meeting startup

### How is everyone?

Axel Larsson: Feeling good, little bit stressed. Love Lindqvist: Feeling good. Simon Engström: Feeling great. Simon Johnsson: Just got out of the hospital with a minor heart inflammation. He will hopefully join the supervisor meeting tomorrow or alternatively rest up this weekend and be back next week.

### Meeting objectives

1. Figure out next step in development

## §2 Reports

1. Development environment
  - As a group we have established a working environment with maven, git and travis CI integration. JavaFX "hello world" is working and we are ready to start designing and then implementing user stories.
2. RAD Document
  - As a group we also wrote a definition of done and imported some early GUI sketches into our RAD document in overleaf.
3. Domain Model
  - We thought a bit about our domain model but are not quite satisfied yet, it feels too small. Will try to work on it a little bit more then we need to start making class diagrams so we can code.

## §3 Discussion items

1. Domain model needs to be turned in before Monday. What are we thinking?
2. How should our backend be designed, how do we save information?
3. Who wants to implement what user stories?
4. What do we want to discuss with our supervisor tomorrow?

## §4 Outcomes and assignments

1. Unsure of how large the domain model should be. We want to consult with our supervisor tomorrow but we think it is in pretty good shape.
2. Our plan is to use JSON to save information. One JSON file to store events and another to store contacts. Googles library GSON seems good, need to investigate further. The events will have information about what users are added to that event. We will store the data in a .oopsie-prm folder in user-home as this is not platform-specific and easy to implement.
3. See Assignments.
4. As mentioned above, we want to ask if our domain model seems appropriate. We also want to show our preliminary GUI. We also want to explain our idea in more detail now that we have thought about it more. Ask what he thinks about JSON.

### Assignments

1. User stories
  - Axel: Adress
  - Love: Contact
  - Simon E.: Events
2. Meeting
  - Love: Create a meeting document for the supervisor meeting 10/9

## §5 End of meeting

We will have our next meeting tomorrow (2021-09-10) at 14:15 with our supervisor in Hubben.
